Annual Report on Acute Care Hospital Services and Licensed Bed Capacity Fiscal Year 2007

Background

In October 2000, Maryland's Department of Health and Mental Hygiene implemented an annual licensure process for acute care hospitals based on inpatient census. This process standardized the measurement of licensed acute care hospital beds throughout the state. The Maryland Health Care Commission calculates the average daily census of each hospital for a 12 month reporting period, and licensed bed capacity is established for the next fiscal year at 140% of the hospital's average daily census. This licensure approach implies an optimal average annual occupancy rate of approximately 71.4% for all hospitals.

The initial implementation of this licensure process resulted in a statewide reduction in licensed acute care hospital bed capacity of 2,773 beds. Total licensed acute care beds have increased each year since the system went into effect in 2001. In the first three years, the increase in licensed beds averaged 1.7% per year. In the most recent three years, ending with FY 07, the increase averaged 1.2% per year.

This *Annual Report on Acute Care Hospital Services and Licensed Bed Capacity: Fiscal Year 2007* has been prepared by the Maryland Health Care Commission's Center for Hospital Services. Licensed acute general hospital beds (medical/surgical/gynecology/addictions [MSGA], obstetric, pediatric and acute psychiatric services) are included in this inventory report. Newborn bassinets and non-acute care beds located in acute care hospitals, such as "special hospital" beds (rehabilitation, chronic care, long term psychiatric services) are excluded from the annual licensure process and are therefore not included in this report. The Commission maintains a detailed inventory of all licensed beds and bassinets in Maryland's acute general hospitals, which is available upon request. The Report also summarizes data on the capacity of acute care hospital services, including the emergency department, surgical services and obstetric services.

Licensed Acute Care Hospital Beds in Maryland: FY 2007

Table 1 shows the licensed acute care bed capacity for each acute care hospital, by service, effective July 1, 2006. The calculation of licensed beds for FY 2007, based on each hospital's average daily census from April 1, 2005 through March 31, 2006, results in a total of 10,426 licensed acute care hospital beds in Maryland. This compares to 10,323 licensed beds in FY 2006, an overall statewide increase of 103 beds from FY 2006 to FY 2007. Table 2 shows the seven year trend in licensed acute care beds by hospital, beginning with the year just prior to implementation of the new licensure process.

Figure 1 shows both the change in the number of licensed beds over the last six years and the change as a percentage, illustrating the relative size of the increases since implementation of the dynamic licensure process.

**Figure 1. Change in Licensed Beds:
Maryland Acute Care Hospitals, FY 2001 – FY 2006**
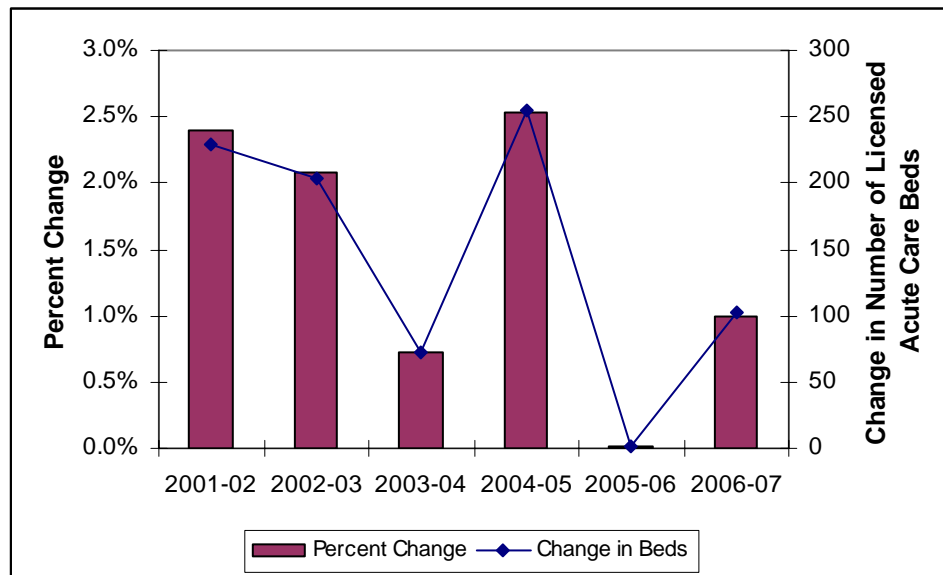

Source: Maryland Health Care Commission

Figure 2 shows the recent trend of increasing utilization in the context of the long term decline in hospital utilization, as measured by average daily census.

**Figure 2. Trend in Average Daily Census:
Maryland Acute Care Hospitals, CY 1980 - 2005**
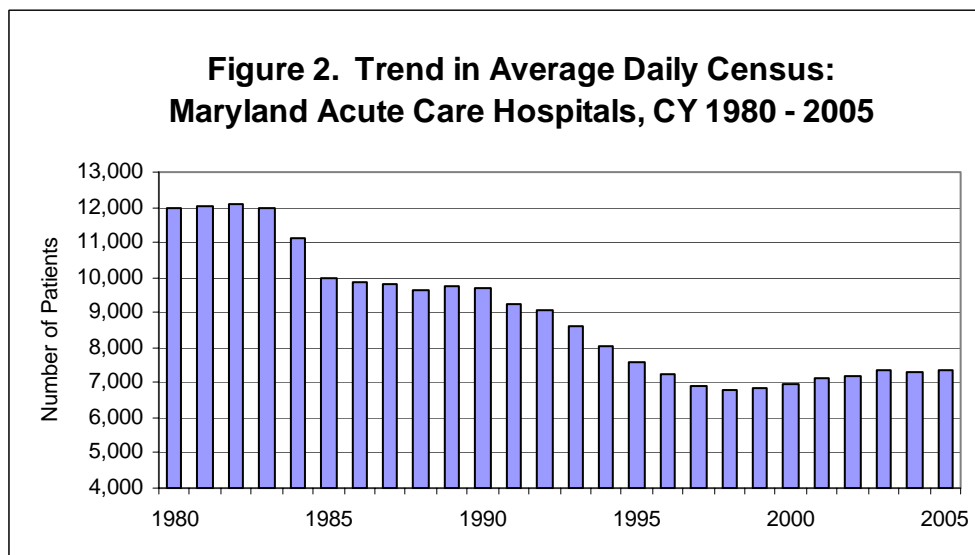

Source: Maryland Health Care Commission. Note: CY 2005 year census data is preliminary.

Table 3 shows the changes in licensed beds from a regional perspective. Three of the five regions saw a decline in acute care average daily census and, thus, in licensed beds in 2007. The number of licensed beds in the Southern and Central Maryland regions increased.

Table 3. Change in Number of Licensed Beds by Region:
Maryland, FY 2006 - 2007

Region	Change in Number of Licensed Beds from FY2006	Percent Change
Western Maryland	(10)	(1.28%)
Montgomery County	(10)	(0.8%)
Southern Maryland	15	1.3%
Central Maryland	112	1.8%
Eastern Shore	(4)	(0.5)%

Source: Maryland Health Care Commission

Table 4 shows the trend in the number of licensed beds by acute care service. All of the increase in licensed beds over the last six years has occurred in MSGA (general medical/surgical and intensive care services).

Table 4. Trend in Licensed Acute Care Beds by Service,
Maryland Acute Care Hospitals, FY 2001 - FY 2007

Service Category	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	FY 2006	FY 2007

Source: Office of Health Care Quality and Maryland Health Care Commission's Application for Annual Licensed Bed Designation, FY 2007. Data are self reported.

Note: Critical care beds include all 'medical surgical intensive care' and 'coronary care' beds, and excludes 'definitive observation/ stepdown' beds, pediatric intensive care beds and NICU bassinets. Critical care beds are part of the larger MSGA inventory.

Table 6 shows the trend in licensed acute care beds among hospitals that are part of a multi-hospital system and hospitals that are independent. The twenty-three Maryland hospitals in the nine multi-hospital systems include 49% of the hospitals and 57% of the licensed acute care beds in the state. For the fourth year in a row, more growth occurred in the non-system hospitals than in the system hospitals. Since FY 2001, the number of licensed acute care beds in non-system hospitals has grown by 10%, compared with an 8.3% increase in the system hospitals.

Source: Maryland Health Care Commission. Notes: 1.'Systems' are local multi-hospital systems with more than one hospital in Maryland. This table includes only those Hospital members in Maryland. 2. Number of licensed beds in effect prior to the October 2000 implementation of Maryland's annual licensure calculation process.

Total Available Acute Care Bed Capacity

The licensure process was initially intended to reduce the number of 'paper beds'[1] on hospitals' licenses. Paper beds were contributing to the perception of significant excess capacity in the 1990s because they inflate hospitals' actual inpatient capacity. With the elimination of 2,766 licensed beds in November 2000, the number of licensed beds in Maryland was closer to actual capacity. However, without a consistent measure of actual physical capacity for acute care, the changes that have occurred over time that affect this inventory, including renovation of excess patient care space to alternative uses, and use of double occupancy rooms as private rooms, are unknown.

The Commission surveys hospitals for the total number of acute care beds they could physically accommodate if necessary. The results of this survey are shown on Table 7.[2] Available acute care capacity is defined as the total number of acute inpatient beds that are available for use, or that could be physically set up in space appropriate for licensed acute inpatient care as admission might warrant. It is a physical count of beds based on the available headwalls, measuring the maximum operating capacity under normal, non-emergency circumstances, rather than a measure of staffing capacity.

Two problems with an accurate reflection of the state's acute care capacity remain. First, acute care bed capacity still exists that is neither licensed nor used. This additional available acute care capacity, which could be available to accommodate short term growth in demand and, if necessary, major emergencies and disasters, has been estimated through the Commission's July 1, 2006 survey at 1,101 beds. Second, some hospitals are operating with fewer beds than they have licensed. Ten hospitals are licensed for a total of 211 more beds than their physical plant can currently accommodate. These hospitals are either in growing communities, or have undergone extensive renovations of excess acute care space to alternative uses during the past decade. Some of these hospitals have recently been approved to add bed capacity.

---

[1] The term "paper beds" typically refers to those beds that are licensed but not used because of lack of demand or because they no longer physically exist due to previous conversion to alternative uses.

[2] This is the third year of the voluntary survey. The data are self reported and not verified by the Commission, and are therefore subject to error. To the extent possible, the Commission is verifying hospital total available capacity on a case by case basis, primarily as part of the review of hospital expansion, renovation, and replacement projects submitted under the Certificate of Need program.

Source: Office of Health Care Quality and Maryland Health Care Commission's *Application for Annual Licensed Bed Designation, FY 2007*
These data are self reported.

Note: Total available physical capacity is defined as the total number of acute inpatient beds that are available for use, including those that could be physically set up in space appropriate for licensed acute inpatient care as admissions might warrant. This should be a count of potentially available physical bed capacity rather than a measure of staffing capacity or a reflection of current use of patient care rooms. This is determined by the number of headwalls and/or gas lines that could be made available for inpatient use, without renovations. Rooms with two headwalls/gas lines should be counted as having capacity for two beds, and rooms with one headwall/gases should be counted as having capacity for one bed, regardless of their current use. It does not include space currently used for non-acute or special hospital beds.
* Prince George's Hospital Center's Total Available Physical Capacity excludes 15 beds currently leased to Mount Washington Pediatric Hospital.

Emergency Department Treatment Capacity

Table 8 summarizes the Commission's supplemental survey of emergency department treatment capacity, and Table 9 shows the trends in Emergency Department treatment spaces from June 1, 2004 through June 1, 2006. Emergency Department treatment spaces are increasing each year at a rate of just over 1%.

Surgical Services Capacity

Hospital surgical capacity is reported as the number of operating and procedure rooms available for surgery as of June 1, 2006. Surgery capacity is reported by the type of room and whether that room is inside the sterile area or located outside of the sterile area. Table 10 summarizes the Commission's supplemental survey on surgery capacity. Table 11 shows the distribution of dedicated cesarean section operating rooms and procedure rooms.

*Procedure Rooms include dedicated cystoscopy and endoscopy rooms and other procedure rooms

Obstetric Services Capacity

Thirty-three of the 47 acute care hospitals provide obstetric services. Table 11 shows the distribution of obstetric services by region, county and hospital.

Table13. Obstetric Services Capacity: Maryland Hospitals, June 1, 2006
